

MORE FLEXIBILITY

PARAGRAPH TEXT

Version 7 features a next-generation text tool that gives you incredible power, while retaining Sign Wizard's famous ease of use. You can use frames, multiple columns, auto bullets, auto numbers, full justify and more.

You also get live, fully editable Text on Arc and Text on Path capabilities, a huge timesaver when last minute changes come up. There's even a menu board mode that automates aligning prices on the right side of a menu.

DYNAMIC OUTLINE

Adding outlines is now easier than ever. You can define up to three dynamic outlines and make any text changes without losing the outline. With outline controls right in the Color Tab, using outlines becomes second nature, as it should be.

BEVEL

The Bevel Tool gives you an easy way to add the third dimension to printed signs. The Bevel effect is always editable and scales perfectly to any output size. You can set softness, contrast, inset, and more to get the perfect bevel effect.

PAINT, CLONE & ERASER

The Brush tool makes it easy to touch up a photo with a solid color, using a soft edge of your choice. The Clone tool lets you quickly clone out existing signage from the sign site photo. With the Eraser, you can easily erase the background of bitmap elements to create a layered look.

LIVE SPELL CHECKING

Spell checking now happens automatically as you type. A red underline indicates misspelled words, and to correct a word, simply Control-right-click on the text to get a menu of alternate spellings. You can add the word to your custom dictionary by selecting Add to Dictionary.

PACKED WITH POWERFUL NEW TOOLS

MORE CREATIVITY

MORE EFFICIENCY

ENHANCED LAYERS PANEL

The Layers Panel displays more information about the structure of your design, including which effects are being used with each graphic. You can easily hide each graphic and its property with a click of the mouse. Groups are now shown in the Layers Panel and can be collapsed just like layers to make your layout easier to manage.

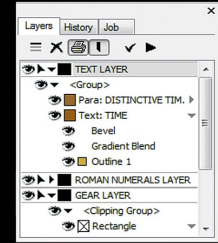

IMAGE FILL

It's easy to add dynamic and realistic repeating textures to printed signs. You can modify the hue, contrast and more to achieve beautiful and sophisticated effects. We include a library of high resolution image fills, plus you can easily add your own.

GRADIENT BLEND

Gradient Blends are an easy and powerful way to add realistic lighting effects and simulate metallic surfaces. The new Presets feature makes it easy to save complex blends for future use.

SOFT SHADOW & GLOW

Soft Shadow and Glow are easy to use and can add that extra pop that gets your signs noticed. You can adjust opacity, softness, color and more in the Property Bar.

EFFECTS LIBRARY

The new Effects Library helps you jumpstart your design with a library of pre-configured effects and combinations of effects. A simple double-click on a preset applies one or more effects instantly. You can also save your own creations as presets to the library. For example, you can combine a gradient, dynamic outline, image fill, and drop shadow and save it to the library as a single preset, which can then be used later. This is power, simplified!
